2012 Crop Results

Vitazyme on Grass Hay
A Testimonial

Researcher: John Clark, Advanced AquaTronics International Corp., Pompano Beach, Florida

Farmer: Jim Lush

Location: Brush Creek, Tennessee

Experimental design: Vitazyme was provided to the grower for a hay trial. The farmer applied the product to 40 acres of grass hay land and harvested the crop without weighing the yield, or comparing with an untreated control. He gave the following report.

“John, thank you for making me aware of your Organazyme [Vitazyme] product. I was very skeptical at first, but after speaking to Paul Syltie, Ph.D., I decided to give Organazyme a try. I have a farm in middle Tennessee, and we normally cut 60 acres of hay, which is enough to keep our cows and horses in hay for the winter. Last year we were only able to cut 40 acres. This meant I would have to buy hay to get through the winter. To my surprise, we got the same amount of hay cutting 40 acres as we did the year before cutting the full 60 acres. The only difference was, I used your Organazyme [Vitazyme]!”

John, I am constantly looking for ways to increase my production while cutting my costs. This year I will cut the full 60 acres, which means [by] using Organazyme [Vitazyme] I should harvest one-third more hay than I need. That’s a huge increase.

Thank you again!”

Jim Lush, Brush Creek, Tennessee
